

Alejandro Villalba

FULLSTACK DEVELOPER JR

Belgrano, CABA, Argentina

☎ (+54) 11 7607-8890 | ✉ villalbaalejandro23@gmail.com | 📱 Qubitsey

Technologies and Languages

Languages and frameworks: Python, C# .NET, Javascript/Typescript, Angular.

Databases: SQL Server, PostgreSQL, MongoDB.

Technologies and tools: Git/Github, Docker, Kubernetes, Azure.

Others: Data structures, Algorithms, Software architecture

Education

Systems Engineering

UNIVERSIDAD TECNOLÓGICA NACIONAL (UTN-FRBA)

2nd year in progress

Mar. 2023 - Now

Bachelor's Degree in Data Science

UNIVERSIDAD DE BUENOS AIRES (UBA-FCEyN)

3rd year in progress

Mar. 2022 - Now

Work Experience

Python/Django Developer

FREELANCER

Caballito, Capital Federal

Aug. 2022 - Dec. 2023

- Frontend development using **HTML, CSS and React**. Backend development using **Python** with **Django Rest Framework**.
- Managed the databases with **PostgreSQL** and integrated it with **AWS Microservices** for data synchronization and analysis.
- I used **Docker** for creating and managing consistent development environments, and managed deploying to **Kubernetes**.

.NET/Angular developer

UPWORK

Belgrano, Capital Federal

Dec. 2024 - Now

- Frontend development using **HTML, CSS and Angular**. Backend development using **C#** with **ASP.NET Core**.
- I manage the databases with **SQL Server** and integrate with **Azure Microservices** for data synchronization.
- I use **Docker** to create and manage consistent development environments and **Kubernetes** to manage deployment.
- Implemented authentication and authorization in web applications using **OAuth 2.0** and **JWT**.
- Unit and integration tests using **Jasmine, Karma** and **XUnit**.
- Deploy CI/CD pipelines with **Azure DevOps** to automate deployments and testing.

Project

Software development using AI tools and quantum computing

QUBITSEY

Remote

Mar. 2021 - Actualidad

- Studying the physics, engineering, and mathematics used to build quantum computer hardware.
- Utilizing quantum algorithms to match classical algorithms, increasing the capacity to analyze and solve complex problems.
- Applying advanced deep learning and reinforcement learning techniques to train artificial intelligence models, employing convolutional and recurrent neural networks to capture complex patterns in games like poker, chess, etc.
- Developing software using **Q#**, implementing quantum algorithms such as Grover's and Shor's algorithms.
- Exploring quantum machine learning models and their implementations in **Q#**.
